

Drugs of Abuse Screening Assays

With a unique, comprehensive and growing homogeneous immunoassay panel and a long history of expertise in Drugs of Abuse Testing, Specialty Diagnostix provides tailored drug testing solutions, manufactured by Immunalysis Corp., to challenge the seemingly continuous emergence of new designer drugs and other illicit substances. Whenever new drugs appear, we are ready to provide effective tools to counter-act them with novel assays and assay technologies.

Assay Characteristics

- Liquid, ready-to-use reagents, calibrators, and controls – no reconstitution required
- Available for both qualitative and semi-quantitative screening
- Use of synthetic material to enhance stability of calibrators and controls, and decrease risk of contamination
- Application protocols for all major clinical chemistry analyzers
- Packaging tailored to your laboratory's needs

Available Test Panels

Immunalysis Select Panel

6-Acetylmorphine (6-AM)
Buprenorphine
Carisoprodol
Ethyl Glucuronide (EtG)
Fentanyl
Ketamine
Meperidine (Pethidine)
Oxycodone
Synthetic Cannabinoids-1 (JWH-018)
Synthetic Cannabinoids-2 (UR-144)
Synthetic Cannabinoids-3 (AB-PINACA)
Tapentadol
Tramadol
Zolpidem

Immunalysis Core Panel

Amphetamines
Barbiturates
Benzodiazepines
Benzoylcegonine (Cocaine Metabolite)
Cannabinoids (THC)
EDDP Specific
Methamphetamines
Methadone / EDDP
Opiates
Phencyclidine (PCP)

ARK Urine Panel

Pregabalin
Methylphenidate Metabolite
